

Haris Nasir Khan

+923170158305 | harriskhann164@gmail.com | www.linkedin.com/in/hariskhan164 | Rawalpindi

Professional Summary

Experienced in developing AI and machine learning solutions across computer vision, NLP, and automation domains. Proficient in designing and deploying models for tasks such as object detection, segmentation, and data-driven insights. Skilled in building intelligent systems, including chatbots and agent-based applications, to automate workflows and improve efficiency. Strong background in applying deep learning and computer vision techniques to solve real-world problems. Adept at end-to-end model development, from research and implementation to deployment and optimization.

Education

- Foundation University of Science & Technology** 2021-2025
Bachelor of Computer Science

Skills

- Agents & Chatbot Development:** Hands-on experience building RAG-based chatbots and multi-agent systems, integrating and fine-tuning LLMs, and working with transformer architectures.
- Deep Learning & Computer Vision:** Strong understanding of dataset preparation, model training, image classification, object detection, and segmentation task.
- APIs & Pipelines:** FastAPI development, LangChain & LangGraph workflows, Retrieval-Augmented Generation, Vector Databases (*Qdrant, Pinecone*), Prompt Engineering.
- Automation & Low-Code:** Building workflow automations using N8N, Zapier, Botpress, Vapi and API integrations
- Tools & Platforms:** Git/GitHub, Hugging Face, Postman, Docker, AI assistants (*ChatGPT, Claude, Gemini, Perplexity*), plus design tools (*Figma, Canva, Adobe Photoshop*).

Work Experience

BitzSol • AI Automation (Current) Dec 2025--

- Designing and implementing AI automation workflows using n8n and conversational AI to streamline business processes.
- Integrating chatbots with APIs, databases, and backend systems for automated data handling and notifications.
- Implementing robust error handling, logging, and continuous optimization to ensure system reliability and performance.
- Developing end-to-end AI chatbots and autonomous agents, including conversation design, backend integrations, and workflow orchestration.
- Conducting comprehensive workflow and chatbot testing, including prompt injection testing and edge-case validation to ensure secure and reliable AI behavior.
- Applying advanced AI concepts such as context management, conditional logic, stateful conversations, and AI-driven decision workflows for scalable automation systems..

Cortech Sols • AI Engineer Intern Aug-Oct_2025

- Developed, tested, and fine-tuned AI models for NLP and Computer Vision applications, optimize performance and accuracy.
- Collected, cleaned, and annotated datasets to ensure high-quality inputs for model training.
- Supported end-to-end AI workflows, including deployment and integration of models into production systems.

Digital Empowerment • AI Intern July -Aug_2024

- ☐ Learned foundational AI and machine learning concepts, gaining practical understanding of model workflows.
- ☐ Assisted in data collection, organization, and preprocessing for small AI projects.
- ☐ Gained hands-on experience with Python and libraries like Pandas, NumPy, TensorFlow and Scikit-learn through experiments.

Technical Projects in Cortech Sols

MotorCut – AI Model Development (Industry Project)

- Developing AI-based automotive computer vision models for vehicle inspection systems.
- Building and optimizing number plate detection and segmentation models using YOLOv8 and Mask R-CNN across diverse vehicles, lighting conditions, and camera angles.
- Implementing vehicle orientation and side classification (front/back/left/right) using YOLOv11x with ConvNeXt-Base, EfficientNet, and ResNet-50, including dataset preparation, annotation, and continuous fine-tuning.

NLP-Based Company Policy Chatbot

- Developed a **Retrieval-Augmented Generation (RAG) chatbot** to automate employee HR policy queries, reducing manual workload by 60% and enabling quick access to policy information.
- Processed and embedded 30–40 internal policy documents into a Qdrant database for high-precision semantic search.
- Enabled fast and accurate response delivery, improving employee self-service experience and reducing repeated inquiries.

Job Description Generator & Resume Screening Agents

- Developed a multiagent AI system using LangGraph to automate workflows, including job posting and candidate screening.
- Indexed company job descriptions into Qdrant database, enabling semantic search and context-aware content generation.
- Designed a JD generation agent that structures and customizes job posts with predefined formats and tones.
- Built a resume screening agent capable of analyzing 50–100 resumes per batch and identifying top-matching candidates.

Technical Automation Projects in BitzSol

AI Customer Support Chatbot → Subscription-Aware Automation – Pocket Pinky

Tools: Botpress / OpenAI (LLM) / Webchat / JavaScript

- Developed an AI-powered customer support chatbot using Botpress that interacts with users, retrieves account information, and personalizes responses based on user data and subscription tiers.
- Implemented stateful conversation flows, autonomous nodes, and conditional logic to dynamically control responses, verify subscription status, and manage access to premium features, enabling scalable and automated user support.

Automated Course Promo Workflow – “Keke” Pink Pill

Tools: n8n / ElevenLabs / HeyGen / Shutterstock/ Metricool / Google Sheets

- Developed an AI-powered workflow to generate and auto-publish daily 30–90 second course promo videos across multiple social platforms.
- Automated voiceover, avatar video, captions, thumbnails, scheduling, and email distribution to eliminate manual effort.

AI Funnel Builder→ Matchmaking Automation

Tools: n8n / OpenAI (LLM) / Webhooks / Data Store / Google Sheets

- Developed an AI-powered funnel builder matchmaking workflow that interacts with users, collects business requirements, and dynamically asks clarifying questions when inputs are incomplete.
- Implemented stateful conversation handling, conditional logic, and automated recommendations to match users with suitable funnel builders, enabling a scalable and extensible AI-driven lead qualification system.

Certifications

- AI for Beginners
 - Data Science & Analytics
 - Prompt Engineering
 - Building and Evaluating Advanced RAG)
 - Agentic Knowledge Graph Construction
 - Introduction to MCP Servers
-
